

Fruit Mill

The Fruit Mill is basically a pulverizer. It has a motor and a funnel on top through which the fruits can be fed into it. The fruits pass through the funnel into a breaking chamber where there is a fan with a blade. This blade hits the fruit and breaks it into pieces. The broken fruits are then ejected out of the machine through a chute. It's a simple machine and does not require any maintenance except for a thorough cleaning.

All contact parts of the machine are SS 304 and the stand is made of MS. Suitable for crushing fruits like apples, pineapples etc. before pulping or juice extraction.

Available Models: 1 Hp – 500 kgs per hour
3 HP – 2000 kgs per hour
5 Hp – 2500 kgs per hour
