

PET Bottle Capping Machine - Pneumatic

This is an easy to use machine for capping plastic bottles – fast. It is very handy and portable and can cap about 10-12 bottles per minute depending on the user's speed. It must be connected to an air compressor. An FRL must be fitted in the pipe from air compressor to the machine. It has a torque setting which ensures that the cap is tightened exactly as much as required. The cap is placed on the bottle and the Pneumatic Capper is pressed on the cap. It is tightened and stops once the set torque is reached.

It's unique features are:

- Being pneumatically operated, it requires very little maintenance except for oil in the FRL.
- Easy to use and requires very little skill.
- It is light weight and portable.
- Uses minimum quantity of air only when it is actually capping.
- No electrical connection and therefore free from short circuits and carbon brush problems.
