

Semi Automatic Rotary Juice Filling & Plastic Cup Foil Sealing Machine

This is an ideal machine for liquid filling and sealing of plastic cups. It fills, places the foil, seals it and ejects the cups. It has a rotary table with multiple cavities in which the cups are placed manually or can be placed automatically by the machine itself. As the table rotates, the liquid is filled, the foil is placed, sealed and the cup ejected one after the other.

The machine is controlled by a PLC and the fill quantity, sealing time, sealing temperature etc can be set as required. The production of the machine can vary from 12 cups/minute to about 30 cups/minute. The machine is constructed of SS 304 and is user friendly.
