

Soda / Soft Drink Filler - for PET Bottles Manually Operated Two Head (Direct Filler)

This is an easy to use twin head soda/soft drink filler for PET bottles. It can be fitted on a wall or a stand. Holes are provided for this. The unit can be connected to a Carbonator with the help of connecting pipe provided. The machine is compact and sturdily built of SS square pipes.

Two PET Bottles are placed on the neck holding plates. Any bottle of size from 200 ml to 2000 ml can be filled. A lever provided below the heads is pressed upwards and the bottle mouths get locked into place in the filling heads. The soda inlet ball valve is opened and soda flows into the bottles. Two air release 'Snift' valves are provided in front of heads. Air in the bottle is released when the bottles are filling. When the bottles are full, the ball valve is closed. Now the bottles can be taken off.

About 10-12 bottles (of size 300 ml) can be filled per minute depending on the speed of the operator. To make soft drinks, the bottles are pre-filled with the required quantity of syrup flavour and then soda is filled. The soda and syrup mix inside the bottles to make soft drink.

The machine requires very little maintenance limited to change of washers and springs. It does not require any expert maintenance which can be done by the user.
