Soda / Soft Drink Machines For PET Bottles

Semi Automatic PET Bottle Capper Pneumatically Operated

This is a timer based Pneumatic PET Bottle Capper. The capper is basically a "Chicago Pneumatic" torque tightening tool. It is fitted on a stand with a timer. The worker keeps a filled bottle with the cap, on a neck holding plate. The plate goes up and down at the time set by the operator. The machine tightens the cap at the torque set on the machine and bottle is brought down. The capped bottle can be taken off and the next bottle is kept. Since the capper is fitted on the machine it need not be manually held – thus reducing operator fatigue.

It's unique features are:

- Being pneumatically operated, it requires very little maintenance.
- Easy to use and requires very little skill.
- It is light weight and portable.
- Uses minimum quantity of air only when it is actually capping.
- No electrical connection and therefore free from short circuits and carbon brush problems.
- The time between each capping can be set as per the convenience of the operator.
- About 12-15 bottles can be capped depending on the speed of the operator.
- A 1 HP air compressor is required for this machine.
