

20 Liter Single / Double Jar - Washing Machine

The Machine is available with one or two brushes to wash one or two 20 liter mineral water Cans at a time. It is fitted with a 1/2 Hp I ph motor which rotates the vertical brushes and a 1/2 HP I ph monoblock pump to jet water inside the Cans at the time of washing.

One or Two Cans are put upside down on the brushes. When a switch is pressed, the brushes rotate and at the same time the pump jets water into it. The Cans are thoroughly cleaned inside. The water that is jetting inside falls back into the collection tub below and can be disposed of as required. A water outlet is provided on the bottom of the tank for this. The pump and motor are fitted below the tank and are covered on three sides thus protecting them from water. The Brushes can be easily changed once they are worn out.

The machine is made out of SS 304 and is sturdy and suitable for continuous use. With a two brush machine about 4 Cans can be washed per minute and for a single brush machine about 2 Cans per minute.
