

## Fruit Juice Machine Centrifugal Type

- The Machine is ideal for extraction of juices from many types of fruits and vegetables
- All the contact parts except the inlet chute are of SS 304
- It is suitable for continuous operation.
- It can be easily disassembled, cleaned and refitted for use within 5 minutes.
- The machine requires very little maintenance.
- It is available with ½ Hp I ph motor suitable to process about 500 kgs of fruits / vegetables in 8 hours & 1 Hp I ph motor suitable to process about 1000 kgs of fruits / vegetables in 8 hours.
- The machine can be installed on a table or a stand. The fruits / vegetables are put in the chute from the top and pressed down with the help of nylon pusher.
- The juice flows out of a small juice outlet pipe on the side of the machine where it can be conveniently collected.
- The scrap falls out of the large pipe on the side of machine.
- The machine can be used for apples, grapes, oranges, mosambi, ripe guava, ripe pineapples, ripe mangoes, Lichees, peaches, apricots, pears, watermelon & vegetables like carrots, beetroots, tomatoes etc.
- Note that large seeds inside fruits / vegetables must be removed before putting in to the machine to avoid damage to the inner plate.
- If the fruits / vegetables are cut in to pieces before putting them in, the machine will work more efficiently and effectively.
