

Induction Sealing Machine - Hand Operated

The Induction Sealer is a simple machine to heat seal foils on top of plastic bottles.

The method of use is simple:

- Place the foil with wad on top of the bottle and screw the cap tight.
- Place the sealer's portable sealing unit on top of the tightened cap.
- Press the red switch on top of the sealer unit for a few seconds.
- The foil inside is heated and sealed on to the plastic bottle by electromagnetic induction
- Sealing is over – take off the unit.
- Repeat for the next bottle.

Features:

- Employs the principle of electro magnetic induction.
- Simple in operation, air cooled.
- Convenient torch unit.
- Ideal for small production.
- Economically priced .
- A Semi automatic machine with conveyor is also available for continuous bulk production.
