

Panneer Press - Pneumatically Operated with 1 / 2 Baskets

The Panneer Press is a pneumatically operated machine for pressing water out of Panneer. It is available with one or two baskets as required. It is made fully out of SS 304.

The machine is supplied with baskets which have perforated walls. The panneer raw material is filled in the baskets. When the pneumatic hand lever valve is pressed, a plate compresses the panneer within the basket thus removing the water in it and compressing it into a slab form. The baskets can be slid forward and panneer removed. The two basket machine is convenient as both of the baskets can continuously be pressed one after the other. The pneumatic components used are of the best quality
