

Piston Type Liquid Filling Machine - Pneumatic Operated - Single Head / Double Head

The machine is pneumatically operated and can fill viscous liquids/pastes like ghee, honey, thick fruit and vegetable juices, ointments, creams, glue and toothpastes etc. Output quantity can be varied from 50 ml to 1000 ml. The material to be filled is put in the hopper. The hopper can be provided with a stirrer if required. The quantity to be dosed can be set easily with the help of a small wheel at the back of the machine. The machine requires an air compressor of at least 1.5 Hp to operate.

Filling is initiated with the help of an electrically operated foot switch. The table holding the bottle / container to be filled can be adjusted as required. The machine can be set to dose automatically also according to the efficiency of the operator. Depending on the quantity per fill, the viscosity and type of liquid/paste, the machine can fill about 6-10 bottles/containers per minute.

The machine is available with one nozzle or two nozzles. For a double nozzle filler, two hoppers are provided. Then production will double.
