

## Rinser with 12 cups for PET Bottles

This unit is meant for rinsing 12 Glass bottles at a time. It can be fitted on top of a cement/plastic or SS Tank. It has 12 nozzles fitted on SS pipes and connected to a central pipe with ball valve which is connected to a water source like overhead tank or pump. All contact parts are SS 304.

This Rinser is mainly for bottles with large mouth diameters and larger sizes. Bottles of size 500 ml, 1000 ml etc for milk and other liquids can be rinsed. 12 Bottles are kept upside down in the nylon cups specially made to suit the mouths of the bottles. When the ball valve is opened, water jets into the bottles and rinses them. The rinse water falls back into the tank below and can be drained or recycled as required. About 24 bottles can be washed in a minute depending on the speed of the operators. The unit requires very little maintenance
