

Soda / Soft Drink Additional Filler - for Glass Bottles - with Gear Box

This machine is used for soda/soft drink filling and crown capping of glass bottles. It can be used for filling 200 ml, 250 ml & 300 ml size glass bottles. It is only a filler / Capper and so needs to be connected to a Carbonator. Soda flows from the Carbonator to the machine. A pipe is provided for connecting the Carbonator and the machine.

The machine is semi automatic and so once a crown cork and bottle have been placed manually, the filling & crown capping take place automatically. The fill quantity can be slightly adjusted with the help of the inlet line ball valve and the snift valve. It is easy to use and the operator has to be able to coordinate the crown and bottle placing with the speed of the machine to ensure a smooth production.

The machine works on a 1 Hp 1 ph motor and suitable gear box. The output is about 400 bottles / hour. The speed of the machine is fixed and cannot be reduced or increased. It is built on a rigid Cast Iron stand and all its parts are made for rugged use. The maintenance is limited to regular oiling, change in gear box oil once in three months and change of washers, V Belt and springs as and when they wear out. Other than the above, it requires very less maintenance.

The main advantage of this machine is it is minimally laborious and so ideal for ladies, un skilled workers etc.
