

Soda / Soft Drink Filler - Semi Automatic Rotary - for Glass bottles (Counter Pressure Filler)

This machine can fill glass bottles of size 200 ml, 250 ml & 300 ml. It can fill about 30 bottles per minute. It is provided with a control panel. The speed of rotation can be adjusted.

The machine is a semi automatic premix counter pressure filler and is easy to use. The operator keeps one bottle at a time on the bottle tables as the tank rotates. Filling takes place automatically and the bottles are taken off after filling. It requires a premix carbonator which is also supplied by us.

The machine is powered by a 1 HP III ph motor and suitable gear box and has the following features

- A 'No Bottle No Fill' lever ensures that the valve opens only when a bottle is placed and avoids unnecessary soda loss.
- The filling valve is closed automatically when the filling is over.
- A snift valve is provided to release excess gas before the bottles are taken off to avoid foaming.
- An automatic air release valve is provided to vent air from the filling tank.
- A pressure gage is provided to monitor tank pressure at all times.
- A pressure safety release valve is provided on the tank.
- The machine is made of SS 304 grade material.
